

VOLCANOES: GLOBAL PERSPECTIVES

CONTENTS

Preface

PART I - INTRODUCTION

1. Eruptions, Jargon, and History

A 'grey volcano' in eruption - Galunggung - 1982

A 'red volcano' in eruption - Kilauea - 1974

Some basic terminology

History of volcanology

Additional reading

Questions for thought, study, and discussion

PART II - THE BIG PICTURE

2. Global Perspectives - Plate Tectonics and Volcanism

Birth of a theory

Volcanoes along divergent plate boundaries

Volcanoes along convergent plate boundaries

Intraplate volcanoes

Additional reading

Questions for thought, study, and discussion

3. The Nature of Magma - Where Volcanoes Come From

Origins of magma

The physics and chemistry of melting

Classification of magma and igneous rocks

Principal magma types

Magmatic and volcanic gases

Additional reading

Questions for thought, study, and discussion

4. The Physical Properties of Magma and Why it Erupts

Magma temperatures

Magma rheology

Magma ascent and emplacement

'Frozen magma' - subvolcanic intrusives

Triggers for volcanic eruptions - why volcanoes erupt;

Repose intervals

Additional reading

Questions for thought, study, and discussion

PART III - VOLCANIC ERUPTIONS AND THEIR PRODUCTS

5. Classifying Volcanic Eruptions

Rittman diagrams

Lacroix classification system

Geze classification diagram

Volcanic explosivity index - VEI

Additional reading

Questions for thought, study, and discussion

6. Effusive Volcanic Eruptions and Their Products

Surface textures - Pahoehoe and Effusive eruption types

Pahoehoe surface structures

Pahoehoe internal structures

'A'a surfaces and structures

Block lavas

Radiocarbon dating of prehistoric lava flows

Additional reading

Questions for thought, study, and discussion

7. An Overview of Explosive Eruptions and Their Products

Ejecta classification

Explosive eruption styles and their products

Additional reading

Questions for thought, study, and discussion

8. A Closer Look at Large-scale Explosive Eruptions

Measuring the sizes of Plinian eruptions

Plinian eruption dynamics

Pyroclastic density currents (PDCs)

PDC flow regimes

Phreatoplinian eruptions

Precursors to Plinian eruptions

'Super-eruptions'

Additional reading

Questions for thought, study, and discussion

PART IV - VOLCANIC LANDFORMS AND SETTINGS

9. Constructional ('Positive') Volcanic Landforms

Large igneous provinces

Shield volcanoes

Composite volcanoes

Minor volcanic landforms

Volcano old age and extinction

Additional reading

Questions for thought, study, and discussion

10. 'Negative' Volcanic Landforms - Craters and Calderas

Small craters

Calderas

Subcaldera intrusions

Post-caldera resurgence

Volcano-tectonic depressions

Caldera formation mechanisms

Caldera roots - relationships to plutonic rocks

Additional reading

Questions for thought, study, and discussion

11. Mass-wasting Processes and Products

Landslides and avalanche

Lahars and hyperconcentrated flows

Lahar dynamics

Lahar 'facies'

Additional reading

Questions for thought, study, and discussion

12. Volcanoes Unseen and Far Away

Submarine and subglacial volcanoes - the meeting of fire, water, and ice

Extraterrestrial volcanoes

Additional reading

Questions for thought, study, and discussion

PART V - HUMANISTIC VOLCANOLOGY

13. Volcanoes: Life, Climate, and Human History

Volcanoes and the origin of life

Volcanoes, atmosphere, and climate

Volcanic influence on soil fertility and agriculture

Volcanoes and human history

Social impact of volcanic eruptions

Additional reading

Questions for thought, study, and discussion

14. Volcanic Hazards and Risk - Monitoring and Mitigation

Hazards and risk

Volcanic hazards

Volcanic risk

Volcanic crisis management

Additional reading

Questions for thought, study, and discussion

15. Economic Volcanology

Earth energy relationships

Volcano energy

Geothermal power

Volcanoes and ore deposits

Other useful volcanic materials

Additional reading

Questions for thought, study, and discussion

Epilogue: The Future of Volcanology
